

CS110 · ACTION 6A · REQUIRED WORKSHEET

C# Code Map

Label what the tutorial code does before you change what it says.

01 Run the tutorial first.

Follow [Ready to Code Some C# NET](#) in Visual Studio. When the app runs, use this sheet to name the parts. Your final pathway app may replace or extend “Hello World.”

Selected context

Use a technical context · Console Status Check

02 Find the parts.

Visual Studio note: A newer Console App may use top-level statements, which means the compiler supplies the Program class and Main method. Label the parts you can see and write “compiler supplies it” for hidden parts.

```
using System;

class Program
{
    static void Main()
    {
        Console.WriteLine("What is your name?");
        string userName = Console.ReadLine();
        Console.WriteLine("Hello, " + userName);
    }
}
```

Library	Class	Main method	Prompt	Input + variable	Output
---------	-------	-------------	--------	------------------	--------

03 Explain each label in your own words.

Class

A container that groups related code.

class program groups the programs code together.

Main method

The method where the console program begins.

static void main() is a method that displays text on the screen.

Method / function

A named action. In C#, a function inside a class is called a method.

Console.WriteLine() is a method that displays text on the screen.

Variable

A named place that remembers a value.

userName stores the name that the user types into the terminal.

Console.WriteLine

Displays a line of text in the console.

The first display is "what is your name"
and the next one say "Hello, " and then the user's name that they typed in.

Console.ReadLine

Waits for typed input and returns that text.

It reads the name that the user types into the terminal and they connects that to the `userName` which is typed into the second `console.writeline` prompt.

04 Trace the data.

INPUT

Name

VARIABLE

userName

OUTPUT

"Hello, " + userName

o5 Plan your pathway version.

What will you replace or add after the tutorial app works?

I will add a variable Status and have the user enter the current computer status and which will in turn output ("Console Status: " + status);

Optional ways to go beyond the tutorial

- ☒ Another prompt ☐ A decision or conditional ☐ ASCII art in the console
☐ An image in README.md ☐ Another tested feature

o6 Save the evidence.

1. Complete every written section.
2. Select **Print or save PDF**, or take clear screenshots.
3. Place the PDF or screenshots in your GitHub Week6/evidence folder.
4. Commit and push the worksheet with your Action 6A project checkpoint.
